Versys® Insecticide

What has low impact on beneficial insects & pollinators but hits hard on insect pests?

What has NO WITHHOLDING PERIOD on Ornamentals & gives control for up to 21 days?

Versys® Insecticide is a pioneering solution from BASF that provides ornamental & horticultural growers an important and advanced new management option for Aphids & Silver Leaf Whitefly whilst supporting and strengthening nursery IPM & rotational programs.

Versys® introduces a very efficient new mode of action subgroup, that delivers superior insect control at low use rates whilst minimising impacts to pollinators and beneficials to deliver exceptional quality plants.

Versys® Insecticide

- New chemical subgroup 9D: powerful, long-lasting and compatible with IPM programs
- Low impact on beneficial insects & pollinator insects such as bees
- Rapid feeding cessation: stops insects feeding in as little as 15 minutes & minimises virus transmission
- Good residual activity for up to 21 days: affects all stages: eggs, nymphs, and adults
- Zero withholding period for ornamentals

AVAILABLE DIRECT FROM GCP

VERSYS® INSECTICIDE

Product code: **VERSYS1** 1L
ACTIVE CONSTITUENT: 100g/L AFIDOPYROPEN
