Why use INITIATOR TABLETS?

"Yes, a simple tablet for your trees can control a seasonal outbreak of Elm Leaf Beetle."

Q. How to use?

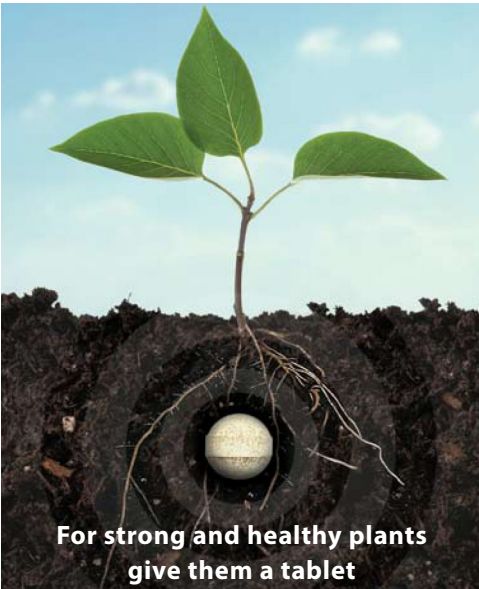

A. Use 1 Initiator Tablet per centimetre of tree trunk. So, say a tree with a trunk diameter of 60cm, use 60 tablets. Dig these into the soil at a depth of 5cm at the drip line of the tree.

Q. How long will it provide protection?

A. A full 12 months. Can be applied at any time to break the life cycle of the Elm Leaf Beetle.

Q. Do I need to wear protective clothing etc?

A. Simply a small mask and a pair of protective gloves.

**For strong and healthy plants
give them a tablet**

Effectiveness:

It is recommended to apply a wetting agent such as Earthcare Soil Wetter or ICL Hydraflo after tablet application. This is to maximise water penetration into the surrounding soil and to maximise the tablets effectiveness.

Earthcare Soil Wetter: ECWAL20 20L

ICL Hydraflo L: OSHYDRAFLOL5L 5L,
 OSHYDRAFLOL20L 20L,
 OSHYDRAFLOL200L 200L
