Our newly expanded range gives you more control

Storm® Secure wax blocks are a trusted industry standard for reliable rat and mouse control. Now we have added two highly palatable new soft baits that can provide even greater effectiveness, speed of control and safety in specific situations.

You can use this guide to select the appropriate BASF Rodent Solution for any situation, or call one of our BASF Sales Managers to get even more specific advice.

Storm[®] Secure Wax Blocks

A cost-effective and convenient maintenance product.

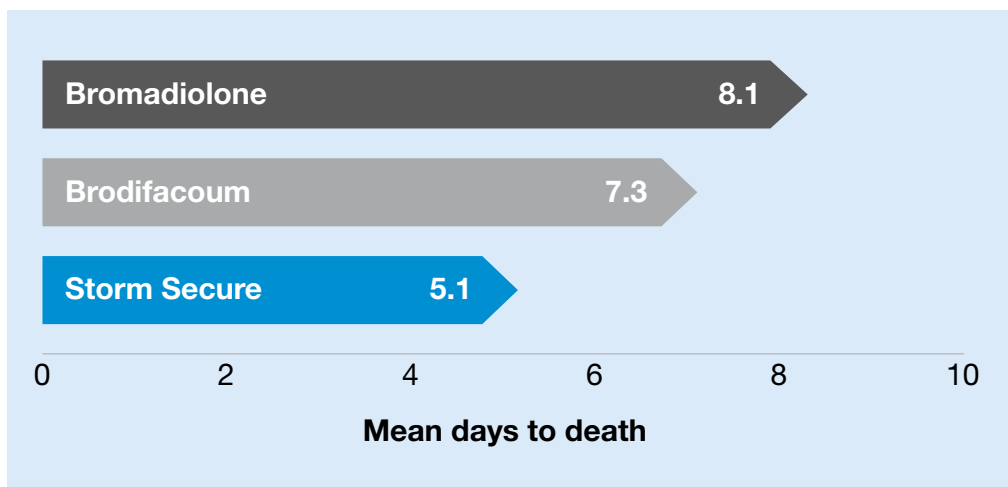

Storm Secure contains a powerful second generation anticoagulant formulated with BASF Fortec™ Technology into a compressed cereal grain block with an added fungicide to prevent mould in humid or damp conditions.

The durable, palatable baits are very easy to use and their exceptional potency means fewer bait pulses are needed to achieve control. It only takes a single feed for rodents to consume a lethal dose.

- ✓ Weather-proof and easily securable
- ✓ Controls rodents resistant to other baits
- ✓ Stable at high temperatures – does not melt
- ✓ Includes Bitrex[®] taste deterrent to protect non-target species

Faster and more complete control

Storm Secure has been shown to provide more rapid and complete control than other second-generation anticoagulants.

Storm® Soft Bait

For rapid clean-out of hard-to-control populations.

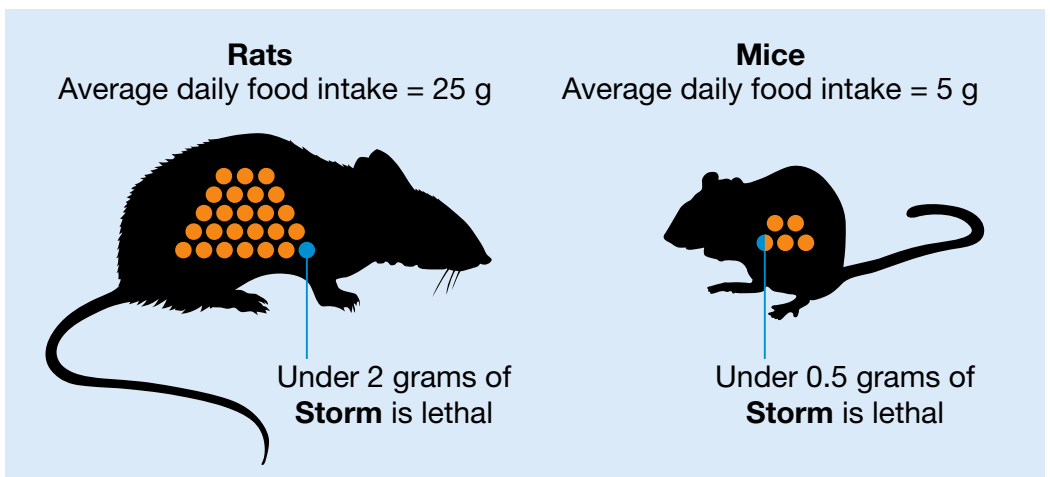

Formulated at the equivalent active ingredient concentration as Storm Secure, Storm Soft Bait is one of the most potent soft bait formulations available.

Its high fat and oil content formulation makes Storm Soft Bait a highly effective option in situations where rodents may not respond to other baits or when other food sources are readily available. The unique formulation is particularly attractive to rats and mice looking for high calorie foods in colder weather or in dry environments where rodents are seeking moisture.

- ✓ Registered for direct burrow-baiting
- ✓ Wax-free formulation increases palatability
- ✓ Matching active loading with Storm Secure for single feed control
- ✓ Permeable sachet releases aromas to attract rodents

Maintaining a lethal advantage

Storm Soft Bait has the same active ingredient loading as Storm Secure, which makes it nearly five times more powerful than other second-generation anticoagulants like bromadiolone and difenacoum.

Selontra® Soft Bait

The new premium solution for off-building use and high-pressure situations.

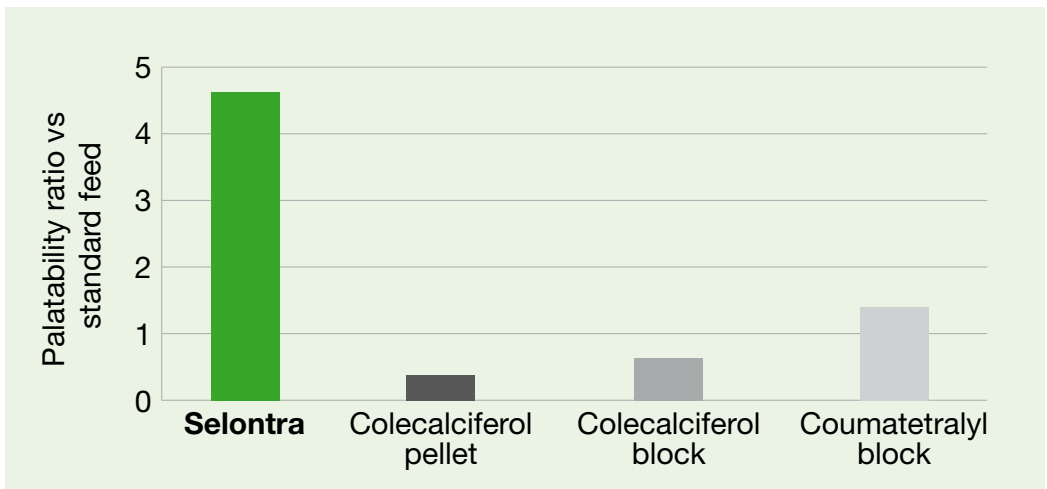

This latest advance in rodent control provides unmatched flexibility coupled with superior palatability. The freedom to use it off-building and along perimeter fence lines makes it a valuable new option for any rodent control program.

The active ingredient in Selontra Soft Bait is rapidly metabolised making it the ideal new first line of defence for intensive farming operations.

- ✓ Super-high palatability
- ✓ Controls populations in as little as a week
- ✓ Stop-feed effect reduces bait wastage
- ✓ No known resistance in rodent populations
- ✓ Registered for use in macadamia orchards and berry crops

A new level of palatability

As this comparison with other products registered for off-building use shows, the exceptional palatability of the Selontra formulation sets a whole new standard.
